

Free Test Reveals If your House Has Toxic Mold Problems!

If you own a home in Florida, this will be the most important message you will ever read.

Here is why:

More than 70% of all houses in Palm Beach County are infected with toxic mold. This mold is very dangerous. And there is a good chance (it's probably only a matter of time) it will wall make you and your entire family sicker than you could ever imagine.

Toxic molds can be *fatal!* It causes many people to die., and often., even their doctors don't understand what it was that made these people sick. These are what experts call "*The Big Three*"

Aspergillus; This is a contaminant/opportunistic pathogenic (in plain English, that means "disease-causing") mold which can be responsible for asthma, nerve damage, liver disease, lung disease, heart disease and severe eye damage. This toxin is so deadly, it is the favorite biological weapon of third-world terrorist and they make it by the barrel.

The bad news is, many Florida homes also make this mold and it is commonly found throughout all the wall cavities of your house.

Stachybotrys: This is another deadly toxin caused by mold and also manufactured by terrorist. It can be lethal to animals and children. It is often referred to as the 'baby killer' and is believed to be responsible for killing seven infants in Cleveland, Ohio.

It is found on wet cellulose containing materials like drywall. It is commonly found in houses after water damage and usually hides in wall cavities. You should be especially concerned if anyone in your home is experiencing difficulty breathing, dizziness, memory loss, hearing loss, urinary tract infections, gastrointestinal tract lesions, depression, headaches, tremors, skin rashes or flu-like symptoms.

It also damages vital organs. Farmers have reported unknowingly feeding their cattle hay contaminated with this toxin and then witnessing the cows hemorrhaging from their eyes... *just before...* they dropped dead like flies.

Penicillium: Another disease-causing mold responsible for a host of infections... especially... cancer.

Listen: There are dozens more toxic molds (all found in Florida homes) which mirror these horrible

effects... and... the truth is..

**Many Houses In Florida Are
A Million Times More Dangerous
Than ALL The Terrorists In The World!**

A good indicator your home is extremely dangerous is if your home as energy efficient, and... your air conditioner works extremely well. If your air conditioner cools your house quickly, it means your home was very tightly built... and... the outer sides of the walls *in* your homes could be full of mold-creating condensation.

That means, every time you turn on your air conditioning unit, you are... "*triggering off*" a dozen or more very powerful biological poisons.

Now For The Good News!

There is a company called High Standard Services which has *100% guaranteed* solutions to ALL of the toxic mold problems in your home. They are so good, they are the official indoor environmental specialists for the Kravis Center.
